OUR SERVICES

Comprehensive equipment services

Mechanical Repairs

Diagnostic and repair work across all diesel-powered heavy equipment, including hydraulic system repairs, electrical and auto-electrical.

Equipment Overhauls

Full strip and assess, major and minor overhauls — earthmoving plant through to on-highway trucks and trailers.

Refurbishments

Structural repairs, hydraulic overhauls and blast & paint, all under one roof. Bins, bodies and chassis returned to like-new.

Component Repairs

Repair and rebuild of major components — engines, drivelines, final drives and cylinders. Service exchange options available.

Fabrication & Engineering

Structural repairs, wear parts, press plates and modifications fabricated in-house alongside the mechanical work.

Field Service & Breakdowns

Fully loaded service vehicles for on-site repairs, mobile welding and breakdown support where the machine sits.

Fleet & Plant Servicing

Scheduled servicing programs for mixed fleets — earthmoving plant, prime movers, rigids and trailers — to OEM intervals, in the workshop or on site. Every service comes back with a defect report, so you know what is coming before it stops you.
